Indian Cement Sector

India's Cement Industry Sector is set to grow at a 7% CAGR over the next five years and will reach 700+ million tonne capacity from the current 640million tonnes by 2026.

In this scenario, we bring this Cement Directory 2026, which is an attempt to report on the cement companies with cement producers profile, current capacity, expansion plans etc., along with details of address, tel, fax, email and details of key personnel.

The directory covers all cement plants – covering 98 % of cement production capacity all over India.

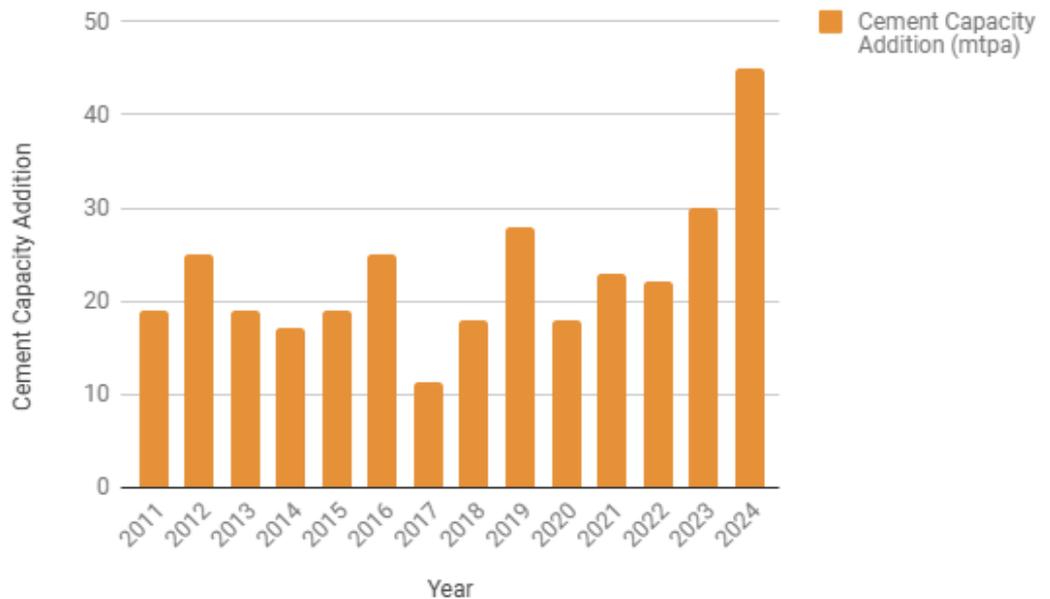

Overview

Indian Cement industry, is the second largest producer of cement in the world following China. It is expected to reach 615 to 700 million tonnes by the year 2026. The sector is dominated by 20 companies which accounts for more than 70% of the output.

The sector is on the rise, following government infrastructure spending for smart cities and other highway projects which is increasing the cement demand. Though the housing sector

forms 67% of cement demand in India, infrastructure forms around 13% demand, the commercial construction 11% and industry segment 9%. The industry is expected to add 69 million tonnes over the next 3 years to raise the capacity to 700+ million tonnes.

Cement Capacity Addition vs Year

A total of 210 large cement plants together account for 97 per cent of the total installed capacity in the country, while 365 small plants account for the rest. Of these large cement plants, 77 are located in the states of Andhra Pradesh, Rajasthan and Tamil Nadu. The Indian cement industry is dominated by a few companies.

Currently, the Indian industry is adding around 18-20 million tonnes of cement production capacity, though around 30% to 40% of its current capacity is lying idle. The

Indian Cement Sector

industry always increases capacity before expansion of market. The expansion activity which started at the end of last boom in 2011, has added over 230 MT and is continuing and reached 641 million tonnes by 2024.

Factors driving Growth

- Development of Smart Cities announced by Union Government which covers 98 cities
- 'Housing for All' to construct 1 Crore house for poor by 2019 (In India, housing sector accounts for a significant 67 per cent of the total cement demand (USA: 22 per cent; China: 25 per cent; Brazil 56 per cent)
- North East India is witnessing a construction boom which is driving up new capacity expansion by major players.
- Sagarmala Project, proposes development of fourteen Coastal Economic Zones (CEZ) across the major and non-major ports of India. The project aims to enhance cement production by 40 MTPA , and make domestic manufacturing more competitive
- Government of India has decided to adopt cement instead of bitumen for the construction of all new road projects on the grounds that cement is more durable and cheaper to maintain than bitumen in the long run

THE ROAD AHEAD

Cement Industry is likely to grow from virgin markets of tier III construction in rural India and also the industry will generate growth through exports in Gulf and South East Asia markets. Indian companies will also explore raising capital from global markets through FCCB route or GDR route. Indian government is also expected to introduce market friendly reforms, making India a globalized cement market place.

Though the industry has done with current round of expansion programme. It has saturated its brownfield capacity expansion and maximum optimization efficiency has been achieved. Further capacity will be added after 2026 via greenfield projects. The current over capacity is putting inevitable pressure on price and profitability, the silver lining is that surplus capacity is likely to moderate over the next year with government increased spending on infrastructure. In the long run, housing sector will continue to drive cement sector growth.

Cement is an essential component of infrastructure world over and is also the largest consumable in the world after water.

It is also the happening sector – after global players play – Indian players going global and Indian majors like Adani entering into the sector with buying large stakes in ACC. After a wave of mergers and acquisitions, Indian cement industry has only 70-80 large players with integrated cement plants, while the smaller mills, grinding units have merged with larger organization or acting as standalone supply units of raw materials.

Cement Industry Report : The Indian Cement industry is presently dominated by Adani, Dalmia and Shree Cement and is increasingly globalized with international player raising their stakes. These companies control more than 55 % of the market. Indian cement production capacity is adequate with the total industrial production capacity at 615 MTPA with the expected demand placed at 500+ MTPA with the exports accounted for, the demand and supply situation is volatile. With new capacities coming up, cement industry profit margin is coming under pressure. However, the expected demand for cement is slated to reach 700 MTPA by the year 2027.

Projects Tracker : Tracking over 50+ new and on-going cement projects along with technology provider, consultant/contractor , promoter address. This report will give you current status and will help you to establish contact with new business available from these projects.

Over 670+ manufacturing plants and 2,700+ key personnel data
