# Indian Paper Sector

*India's Paper Industry Sector is set to grow at a 7% CAGR over the next five years and will reach 27 million tonne capacity from the current 15 million tonnes by 2028.*

*In this scenario, we bring this Paper Directory 2026, which is an attempt to profile the paper & packaging companies with their company profile, current capacity, expansion plans etc., along with details of key personnel, address, tel/fax/email etc.,.*

*The directory covers all paper mills in India making printing paper, writing paper, newsprint, packaging segment-kraft paper etc.,.*

## Overview

The Indian Paper Industry accounts for about 4% of the world's production and is positive over the coming years. The growth is expected to be driven by the rising demand for paper products, which is majorly supported by various government education programmes. India's per capita consumption of paper is just around 16 kg, one of the lowest in the world whereas for USA, it is around 320 kg, European Union -129 kg, Asia 45 kg and 75 kg in China. It is said, an increase of 1 kg in per capita consumption will lead to a demand of 1 million tonnes of paper products. There are vast demands in the area of tea bags, filter paper, tissue paper, medical-grade coated paper, lightweight online coated paper, etc. This denotes a huge potential. However, the industry is facing challenge to adopt environment friendly technology and to practice conservation measures. Its capacity utilization is also wavering around 80% due to old technology.

From just 17 paper mills in the year 1951 with a capacity of 0.14 million tonnes, the Indian paper industry has grown to 825 mills with a total capacity of 25 million tonnes. While the paper industry comprises a number of small scale mills, relatively large mills continue to contribute to a sizable share of total production. Large Paper Mills, about 80 units accounts for production share of about 60% and balance smaller units produce the remaining 40% of paper goods.

The Indian paper industry can be broadly classified into three segments:

**Printing & Writing (P&W):** Printing and writing segment caters to school books, office stationery, printed textbooks, copier papers, notebooks etc. This segment forms ~31% of domestic paper industry. Governments thrust on education through steps like Sarva Shiksha Abhiyan, Right to Education, increase in e-commerce venture and other service sector are key factors contributing to the growth of this segment.

**Packaging & Paper board:** This segment primarily caters to packaging industry in tertiary and flexible packaging of FMCG goods, pharmaceuticals, textiles and e-commerce deliveries. This segment forms ~47% of the domestic paper industry and is currently rising rapidly due to factors of ecommerce, urbanization and higher share in organized retail in FMCG and pharmaceuticals. This is currently fastest growing segment owing to the above factors.

On the packaging segment, corrugated boxes made of kraft paper segment is highly unorganized with nearly 90 percent of the production coming from small and unorganized

Country -Wise Imports

# Indian Paper Sector

players. Within Paperboards, there is also a rising demand for Value-Added Paperboards (VAP)

**Newsprint:** Newsprint is used in production of newspaper & magazines industry. India has 84,000 Newspapers in multiple languages and 110 million copies in circulation. Newsprint segment forms ~18% of Indian paper industry. However, this segment is under stress from imports from South East Asia. The urban population is driving the growth, with 80% of urban populace with read and writing ability, it creates a latent demand for consumption of newspaper/magazines. The regional media in tier-2 and 3 penetration is growing at 10-15%. Another case with India is newspaper have become brand advertorials and purchase guide.

**Raw Material & Variable Costs:** Pulp is the primary raw material used for manufacturing of paper, and is obtained through processing of fibers separated from wood, wastepaper, agriculture residues etc. The industry also import paper pulp to overcome shortage. Increasing demand of wood /bagasse for other industries like bio-fuel based power plants, ply boards increase pulp making cost.

Another key raw material is coal to meet their power requirements. The declining trend in last 4 years in global coal prices has helped Indian paper industry to some extent. Earlier Indian paper industry was considered as core sector industry and hence it used to get coal on priority basis and at subsidized rates but from 2005 it is in non-core list of industries and hence paper

players have to purchase domestic coal at higher prices. Timely availability of coal is another issue. To counter this, Indian paper players rely on imported coal which is available at lower cost as compared to domestic coal.

## Paper Industry – Raw Material Usage

**Environmental Concerns:** Paper Industry has received both brick bats and bouquets from environmentalists. “Save Paper and Save Planet “slogan weakens paper demand, while “Ban plastics” to substitute paper bags with plastics helps it. The availability of paper pulp- the key raw-material has always been a matter of concern for the industry with increasing deforestation and civilization encroachment into pasture lands. The industry has been requesting the government to allot degraded revenue and forest lands to cultivate fodder for wood pulp and social forestry programme for generating feedstock. But nothing major has been done by government. Another concern from environmentalists are water consumption and waste discharge. The industry which used to consume 200 cu.meter of water has reduced it now to 50. Cu.meter and efforts are on to reduce it further to 40 cu.meter. Many paper mills have been forced to shut down on account of water shortage

## THE ROAD AHEAD

Paper industry is bracing for consolidation and now time is ripe for another round of consolidation and co-operation among various players in the next few years. The move will help leverage fast changing manufacturing technologies and smoothen backward integration for raw materials. At the end of this decade, we may see only 10 players dominating the industry like cement.

Despite the continued focus on digitization, India's demand for paper is expected to rise 53 per cent in the next six years, primarily due to a sustained increase in thrust in rural education, growing ecommerce consumerism, increase in organized modern retailing, increasing use of documentation are expected to positively affect paper consumption and demand in India.

Indian paper industry is expected to grow at a CAGR of 7% over the next five years to about 20 mn tones. The growth will be largely driven by printing & writing and packaging & paper board segment.
